

POWER. PRESENCE.

5 WAYS TO SAVE HVAC

- 1 Close doors.** Set and maintain air conditioning boundaries to keep cooled spaces cool.
- 2 Use only what you need.** Minimize the number of on-line air conditioning plants.
- 3 Temperature check.** Run tests to avoid running convection heaters and air conditioning simultaneously.
- 4 Keep it Clean.** Conduct condenser and fan coil unit cleanings to improve chill water flow through A/C system. Clean fan rooms, duct work, and filters regularly to improve air flow.
- 5 Maintain balance.** Keep diffusers in place for ventilation system balance.
